Abstracts

Hydrogenated DCPD resin is a fully saturated, thermoplastic hydrocarbon resin produced through the catalytic hydrogenation of dicyclopentadiene (DCPD), a byproduct of ethylene production from naphtha cracking; this process eliminates double bonds in the molecular structure, resulting in a material characterized by exceptional thermal stability, light color, high softening point, excellent weatherability, and strong resistance to oxidation, acids, and alkalis. It is widely utilized as a tackifier, modifier, or compatibilizer in adhesives, sealants, coatings, rubber compounding, and thermoplastic elastomers, where its properties contribute to enhanced performance in durability, clarity, and aging resistance compared to non-hydrogenated hydrocarbon resins.

The global Hydrogenated Dcpd Resin market size was estimated at USD 350.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
