Abstracts

Hydrogenated palm glycerides are glyceride products obtained by hydrogenating palm oil. During the hydrogenation process, the unsaturated fatty acids in palm oil are converted into saturated fatty acids through hydrogenation reactions, thereby improving the stability and antioxidant properties of the product. This glyceride has good emulsifying, dispersing and lubricating properties and is widely used in the food, cosmetics and pharmaceutical industries. In the food field, it can be used as an emulsifier, stabilizer and thickener to improve the taste and texture of food; in cosmetics, it can enhance the moisturizing and lubricating properties of the product, making the skin feel soft and smooth; in the pharmaceutical industry, hydrogenated palm glycerides can be used as an excipient for drugs to help them disperse and dissolve better.

The global Hydrogenated Palm Glycerides market size was estimated at USD 774.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
