Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydrohalic Acids competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Hydrohalic acids production reached approximately 3,950 kilotons, with an average global market price of around US\$ 1,500 per ton. Hydrohalic acids are a group of strong or moderately strong inorganic acids formed when hydrogen gas reacts with halogens (fluorine, chlorine, bromine, iodine) to produce compounds of the type HX, where X is a halogen. In aqueous solution, these acids dissociate to release hydrogen ions (H⁺), making them highly corrosive and reactive. The major hydrohalic acids include hydrofluoric acid (HF), hydrochloric acid (HCl), hydrobromic acid (HBr), and hydroiodic acid (HI), each differing in acid strength and industrial use. They are widely applied in chemical synthesis, pharmaceuticals, metal processing, etching, and as laboratory reagents, though some, like HF, require extreme safety measures due to high toxicity and ability to penetrate tissues. The key market drivers for hydrohalic acids are primarily linked to their broad industrial, chemical, and technological applications. Demand is fueled by their role as essential raw materials and intermediates in pharmaceuticals (for active pharmaceutical ingredient synthesis and salt formation), chemical manufacturing (used in halogenation, catalysis, and specialty chemical production), and semiconductor and electronics industries (notably HF for silicon wafer etching and cleaning). Metallurgy and surface treatment also drive demand, as HCl and HF are used in pickling, refining, and etching metals. Additionally, water treatment, food processing, and oil & gas refining rely on hydrochloric acid for pH control and processing functions. The growth of agrochemicals, fluorochemicals, and polymer industries (such as fluoropolymers and halogenated plastics) further stimulates the market. Environmental regulations and stricter purity requirements, particularly in electronics and pharmaceutical sectors, are

pushing manufacturers to develop higher-grade hydrohalic acids, adding momentum to global demand.

The global Hydrohalic Acids market size was estimated at USD 5849.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
