Abstracts

Hydrolyzed silk protein is a water-soluble peptide derived from silk fibers through enzymatic or chemical hydrolysis, breaking down the complex fibroin structure into smaller, more bioavailable amino acid chains and polypeptides that retain silk's inherent moisturizing, strengthening, and conditioning properties. This process enhances its compatibility with various formulations, making it a versatile ingredient prized for its ability to improve moisture retention, elasticity, and texture in personal care and cosmetic products such as shampoos, conditioners, serums, and creams, while also finding applications in nutraceuticals and functional foods due to its protein content and bioactive potential.
