Abstracts

Hydrophilic gelling fiber dressings refer to advanced wound care products composed of absorbent fibers coated with a special gel formulation that promotes wound healing through several mechanisms. The key feature of these dressings lies in their unique structure whereby the fibers remain intact even when saturated with exudates or saline solutions. This allows them to conform closely to the shape of the wound bed, providing mechanical protection to fragile skin and improving macromolecular transport through perilesional capillary endothelial junctions.

The global Hydrophilic Gelling Fiber Dressings market size was estimated at USD 725.6 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
