Report Overview

Hydrophilic polyurethane foam is a kind of foam material designed to absorb and retain moisture. It is made of polyurethane polymer treated with hydrophilic agent, which enables foam to attract and retain water molecules. This makes it suitable for various applications where water absorption is important, such as wound dressings, medical sponges, and cleaning products. Hydrophilic polyurethane foam usually has an open cell structure, which means that the holes or pores of foam are interconnected, allowing water to flow easily through the material. The opening structure also makes the foam highly flexible and compressibility, making it conform to the shape of the object in contact. In addition, hydrophilic polyurethane foam is usually very durable, tear resistant, and suitable for demanding environments.

This report provides a deep insight into the global Hydrophilic Polyurethane Foam market covering all its essential aspects.
