Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydrophilic Polyurethane Prepolymer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hydrophilic polyurethane prepolymer is a polyurethane intermediate with hydrophilic groups (such as polyether, carboxylate or sulfonate) introduced into the molecular structure. It can form a stable emulsion or gel after contact with water, and has both the mechanical properties and hydrophilic properties of polyurethane. Its synthesis usually uses isocyanate and polyether polyol as the main raw materials. By adjusting the -NCO end group content and the proportion of hydrophilic segments, it can achieve functions such as water dispersibility, adhesion or water absorption. It is widely used in water-based coatings, medical dressings, textile finishing agents and sealants.

The global Hydrophilic Polyurethane Prepolymer market size was estimated at USD 1200.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
