## Abstracts

The Hydrophilic PPS Electrolytic Separator is made of polyphenylene sulfide (PPS). Although PPS has advantages like heat - resistance and high strength, it's hydrophobic. So, it's chemically treated to attach hydrophilic functional groups such as  $-SO_3H$  or  $-C=O$  to its molecular chains. Or, a mixture of hydrophilic inorganic non - metallic oxides and polymers is coated on PPS fabric. This enhances its hydrophilicity, reduces the internal resistance of the electrolytic cell, and plays a key role in separating and conducting ions in alkaline water electrolysis for hydrogen production.

The global Hydrophilic PPS Electrolytic Separator market size was estimated at USD 193.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 40.20% during the forecast period.
