Report Overview

An Intraocular Lens (IOL) is a lens implanted in the eye usually as part of a treatment for cataracts or for correcting other vision problems such as short sightedness and long sightedness, a form of refractive surgery. The main body and the supporting part of the hydrophobic acrylate aspheric intraocular lens are made of hydrophobic acrylate material. Aspheric IOLs are monofocal lenses that correct for spherical aberration. The result is a lens that will provide better overall vision than traditional IOLs, especially at night. Patients who choose an aspheric IOL can expect: Improved contrast sensitivity.
