## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydrophobic Acrylic IOL competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A hydrophobic acrylic intraocular lens (IOL) is a foldable, synthetic lens implant primarily made from acrylate or methacrylate copolymers with non-polar side chains, endowing it with a high water contact angle and low water content. This material combination provides excellent biocompatibility, sharp optical clarity, and a unique "tacky" surface that minimizes the incidence of posterior capsular opacification (PCO) by adhering closely to the lens capsule. Its flexibility allows for small-incision implantation through injector systems, enabling rapid visual rehabilitation after cataract surgery. The growth of the hydrophobic acrylic intraocular lens (IOL) market is driven by multiple core factors. The global aging population is accelerating, and the incidence of cataracts rises significantly with age, directly spawning a huge demand for IOLs and serving as the fundamental driver for market expansion. Meanwhile, ophthalmic surgical technology continues to innovate, with advanced surgical methods such as minimally invasive surgery and femtosecond laser-assisted cataract surgery becoming increasingly prevalent. These surgeries have higher requirements for the adaptability and stability of IOLs, and the characteristics of hydrophobic acrylic materials can just meet these needs, further boosting the market demand for such products. In addition, with the improvement of living standards, patients' expectations for postoperative visual quality are no longer limited to "seeing", but pursue "seeing clearly and comfortably" and hope to reduce dependence on glasses or contact lenses. This makes high-end hydrophobic acrylic IOLs with multifocal and astigmatism correction functions more popular, driving the market towards high-end development. However, the market also faces many challenges in its development. Currently, the market pattern is highly concentrated. A

few international medical device giants have long dominated the market with their technological accumulation, brand advantages and sound channel layout, which poses huge market access barriers for new entrants and local enterprises, making it difficult to achieve a breakthrough in market share in a short period of time. In terms of product R&D, the research and development of hydrophobic acrylic IOLs involves multiple complex fields such as materials science, optical design and biocompatibility. It not only requires continuous investment of huge funds, but also faces the constraints of technical bottlenecks. The long R&D cycle and high risk of failure greatly test the R&D strength and capital endurance of enterprises. In addition, medical insurance policies and reimbursement systems also impose certain restrictions on market demand. Some high-end hydrophobic acrylic IOLs are not fully covered by medical insurance due to their high prices, and patients have to bear high out-of-pocket expenses. This has restrained the purchasing willingness of some consumer groups to a certain extent and affected the full release of market demand.

The global Hydrophobic Acrylic IOL market size was estimated at USD 3768.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
