Abstracts

Hydrophobic alkyl acrylates are a class of synthetic polymers derived from acrylic acid esters with long-chain alkyl groups, characterized by their strong water-repelling properties due to low surface energy and molecular structures that minimize interactions with polar solvents. These materials are integral in formulations requiring moisture resistance, such as waterproof coatings, adhesives, sealants, and textiles, where they enhance durability and performance by reducing water absorption and preventing degradation. Their versatility also extends to applications in agriculture for controlled-release fertilizers, in construction for weather-resistant barriers, and in personal care products like sunscreens and cosmetics to improve water resistance and skin feel.

The global Hydrophobic Alkyl Acrylate market size was estimated at USD 485.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
