Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydrophobic Down Jacket competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global hydrophobic down jacket production reached 7.8279 million units, with an average selling price of \$404.66 per unit and a gross profit margin of approximately 47.5%-49.9%. Annual production capacity ranges from 300,000 to 1.2 million units across various companies. The International Down and Feather Bureau (IDFB) has established a testing standard for waterproof down. The test standard is IDFB-18A, which measures water repellency. According to the IDFB-18A test method, down is divided into five levels of water repellency, with level 5 being the best. The longer the water repellency, the better the down's water repellency. While down is lightweight and warm, it has a significant drawback: its thermal insulation value decreases significantly when wet. Research has shown that when down becomes damp, especially when it has a high liquid moisture content, its thermal insulation value drops to half of its dry value. Excessive washing or machine washing also reduces down's thermal insulation. This is where hydrophobic down comes in. Down is specially treated to impart a durable water repellency. This treated down is called waterproof down, also known as hydrophobic down. A hydrophobic down jacket is a garment filled with hydrophobic down that has been specially treated to form a hydrophobic film. This water-repellent down is also called "waterproof down" or "waterproof fleece". Its core characteristic is that the surface of the down has a long-lasting water-repellent ability, which can prevent the intrusion of water vapor for a period of time, keep the down dry and fluffiness, and thus maintain good thermal insulation performance.

The global Hydrophobic Down Jacket market size was estimated at USD 3168.0 million

in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.90% during the forecast period.
