Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydrophobic Down competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global hydrophobic down production reached 4,182.43 tons, with an average selling price of \$119,600 per ton and a gross profit margin of 18.98%. Some companies have an annual production capacity of 700 tons. Hydrophobic down refers to natural down, typically goose or duck down, that has been treated with a special waterproof coating. This treatment aims to reduce water absorption and dry faster, thereby maintaining its thermal insulation and loft even in wet conditions. Ordinary, untreated down fibers are delicate and stick together when exposed to water, causing the down to collapse and the air trapped within to be squeezed out, virtually eliminating its thermal insulation properties. Consequently, down filling without a hydrophobic treatment will not provide warmth in a wet jacket or sleeping bag until it completely dries. In contrast, the waterproof coating of hydrophobic down prevents or slows the down from getting wet, allowing it to retain its loft and warmth longer, even in humid conditions. Downstream brands include NothommeBlue, Camel, FILA, Kailas, MILLET, LILANZ, X-BIONIC, and Trekitt.

The global Hydrophobic Down market size was estimated at USD 500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.90% during the forecast period.
