Report Overview

A hydrostatic test pump is designed to test the pressure in a water or gas line up to 12,000 PSI to ensure the lines are safe from leaks. Once a line has been installed for a sprinkler or gas line the user will pump fluids into the line and build the pressure up to a specific PSI, the pressure is then held in the line to evaluate if the pressure remains constant. If there are no leaks the pressure will remain the same, leaks can be detected by a loss in pressure or using a leak detection device that can detect any air bubbles in the line.
