A liquid level transmitter is a pressure sensor that measures liquid level. The hydrostatic throw-in liquid level meter is based on the principle that the static pressure of the measured liquid is proportional to the height of the liquid. It adopts the advanced isolation diffusion silicon sensitive element or ceramic capacitive pressure sensitive sensor from abroad to convert the static pressure into an electrical signal, and then converted into a standard electrical signal after temperature compensation and linear correction.

The global Hydrostatic Throw In Liquid Level Meter market size was estimated at USD 1388.94 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
