## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydrotalcite Antacid Chewable Tablets competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Hydrotalcite Antacid Chewable Tablets production reached approximately 52.85 M boxes, with an average global market price of around 3.74 USD per Box. Hydrotalcite Antacid Chewable Tablets are a form of orally administered medication used to neutralize excess stomach acid and provide relief from symptoms associated with hyperacidity. These are solid, usually flavored tablets designed to be thoroughly chewed before swallowing. Their primary active ingredient is Hydrotalcite, a layered compound belonging to the class of aluminum-magnesium antacids (specifically, a layered double hydroxide, or LDH). The high global incidence of stomach diseases, coupled with an aging population and unhealthy dietary habits among young people, has driven up the demand for treatments for conditions such as excessive stomach acid and chronic gastritis, making antacids and stomach-protecting medications a staple in many households. Hydrotalcite Antacid Chewable Tablets, with their core advantages of gently neutralizing stomach acid and rapidly forming a protective film on the gastric mucosa, are suitable for both immediate relief of daily acid reflux and heartburn, and long-term adjunctive treatment of chronic stomach conditions, appealing to all age groups. As health awareness increases, consumers demand higher levels of safety and gentleness from medications. Hydrotalcite Antacid Chewable Tablets, as a natural layered mineral-derived ingredient, exhibits increasingly prominent characteristics of low irritation and good tolerability, gradually replacing some traditional antacids. This leads to a continuously expanding demand base and a promising future. The raw materials of Hydrotalcite Antacid Chewable Tablets mainly include Active Ingredient (Hydrotalcite), Filler (Mannitol, sorbitol, etc.), Flavors (Mint Flavors, Orange

Flavors), Sweeteners (Sodium Saccharin and Stevioside, etc.), Others.

The global Hydrotalcite Antacid Chewable Tablets market size was estimated at USD 198.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
