Report Overview

Hydrotreated vegetable oil (HVO) is a renewable diesel produced through a hydrogenation process. The process uses vegetable oil, animal fat or waste oil as raw materials, removes oxygen molecules through hydrogenation, and obtains a clean fuel with chemical properties similar to traditional fossil diesel. HVO has excellent combustion performance and lower carbon emissions. Compared with traditional diesel, it can not only reduce greenhouse gas emissions, but also can be used directly in existing diesel engines. Therefore, it is widely used in transportation and other fields that require diesel.
