## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydroxy Methacrylate Monomers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hydroxy Methacrylate Monomers, mainly represented by Hydroxyethyl Methacrylate (HEMA) and Hydroxypropyl Methacrylate (HPMA), are hydroxyl-functional methacrylate esters widely utilized in specialty polymer formulations. Their chemical structure features reactive double bonds combined with hydroxyl groups, allowing copolymerization and subsequent crosslinking with isocyanates, melamine resins, and epoxy systems. This dual functionality makes them indispensable in producing durable coatings, adhesives, and sealants, as well as high-performance resins for electronics, medical applications, and dental materials. In 2024, the global production of Hydroxy Methacrylate Monomers reached approximately 212,020 tons, with an average global market price of around US\$2,288 per ton. Demand is driven by industries seeking improved adhesion, weather resistance, and mechanical strength, particularly in automotive coatings, UV-curable resins, and specialty adhesives. From a supply chain perspective, Hydroxy Methacrylate Monomers are closely tied to upstream methacrylic acid and alkylene oxides (ethylene oxide, propylene oxide). These raw materials are petrochemical derivatives subject to global oil price volatility, which significantly affects production costs and margins. On the production side, global majors such as Dow and Nippon Shokubai lead with high-purity products and established distribution networks, ensuring supply reliability to multinational end-users. In China, regional players including Sanlian Chemical, Renxin Environmental Materials, Shandong Xinglu Biological Technology, Changzhou Hecler Chemical, Quzhou Fangda Chemical, and Hechuang Chemical provide competitive capacity, often supplying local markets at lower cost. Downstream, key consumers include coating manufacturers (AkzoNobel,

PPG, Sherwin-Williams), adhesive specialists (Henkel, Sika, 3M), and electronics material producers. Buyers in Europe and North America emphasize consistent quality, tight specifications, and regulatory compliance (e.g., REACH, FDA, EPA), while Chinese buyers focus more on cost optimization and procurement flexibility, often sourcing multiple grades depending on application needs. Looking forward, the Hydroxy Methacrylate Monomer market is expected to grow at a healthy pace, supported by global trends toward waterborne coatings, low-VOC formulations, and advanced UV-curable technologies. Asia-Pacific, especially China, will remain the largest production and consumption hub due to its rapidly expanding coatings and adhesives industries. Europe is projected to see stable demand growth as strict environmental regulations drive the adoption of high-performance methacrylate monomers in sustainable formulations. North America will continue to rely on HEMA and HPMA in advanced adhesives, dental resins, and high-value specialty polymers. Competition is intensifying as Chinese producers increase output and improve product quality, putting downward pressure on average prices, but premium applications such as medical-grade resins, optical materials, and specialty electronics will sustain higher margins for international leaders. Overall, Hydroxy Methacrylate Monomers are expected to remain essential in the development of next-generation functional polymers, balancing environmental compliance, performance requirements, and cost efficiency.

The global Hydroxy Methacrylate Monomers market size was estimated at USD 485.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
