Report Overview

HEA is a hydroxy functional acrylic monomer which can be used in a variety of ways to produce resins that are useful in high performance coating applications. Using typical methods for the polymerization of ethylenically unsaturated monomers, HEA can be used to attach hydroxy groups to an acrylic polymer backbone. The pendant hydroxyl groups can then act as sites for reaction with a variety of cross-linking agents. HEA allows faster curing cycles and/or reduced baking temperatures, compared with hydroxyalkyl methacrylates. Additionally, HEA can be formulated at higher solids in coating applications. It is also a key raw material for acrylic polyols.
