Abstracts

Hydroxyethyl Starch (HES) API is a semisynthetic colloid derived from amylopectin, typically sourced from waxy maize or potatoes, which undergoes hydroxyethylation to modify its physicochemical properties, resulting in a starch derivative used primarily as a plasma volume expander in intravenous fluids to treat hypovolemia and maintain circulatory stability during surgery, trauma, or shock by increasing oncotic pressure and retaining fluid within the vascular system, though its clinical use has become more restricted in recent years due to safety concerns, including risks of renal impairment and coagulopathy, leading to increased regulatory scrutiny and a shift toward alternative volume expanders like crystalloids or albumin in many markets.

The global Hydroxyethyl Starch Api market size was estimated at USD 120.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -2.50% during the forecast period.
