## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydroxyethylethylenediaminetriacetic Acids (HEDTA) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hydroxyethylethylenediaminetriacetic acid (HEDTA) is an aminopolycarboxylic acid chelating agent. It is structurally similar to EDTA but incorporates a hydroxyethyl group, which imparts slightly different solubility and stability characteristics. HEDTA functions by forming stable water-soluble complexes with metal ions, particularly transition metals, making it valuable in applications that require metal ion sequestration or control. It is commonly used in agriculture as a micronutrient carrier in fertilizers, in water treatment for controlling metal ion precipitation, and in industrial cleaning and detergent formulations. Its lower metal-binding stability constant compared to EDTA allows for more selective and pH-sensitive chelation, making it useful where controlled release of metals is required. Hydroxyethylethylenediaminetriacetic acid (HEDTA) is a chelating agent with the chemical formula  $C_{10}H_{16}N_3O_7$  and a molecular weight of 278.26 g/mol. It appears as a white to off-white crystalline powder and is highly soluble in water, forming stable aqueous complexes with metal ions. HEDTA contains three carboxylic acid groups, two amine groups, and one hydroxyethyl group, which enable it to bind metal ions effectively over a pH range of 4 to 9. It is typically supplied as a free acid or in salt forms such as trisodium or ammonium salts, with common concentrations ranging from 40% to 60% in liquid formulations. It has a moderate biodegradability profile, is stable under dry, cool conditions with a shelf life of at least two years, and shows low toxicity under normal handling. Compared to EDTA, HEDTA provides more selective metal chelation and is preferred in applications requiring controlled release or lower environmental persistence.

The global Hydroxyethylethylenediaminetriacetic Acids (HEDTA) market size was estimated at USD 179.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
