Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hydroxyl Functional Acrylic Monomers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hydroxyl Functional Acrylic Monomers, primarily represented by Hydroxyethyl Acrylate (HEA), Hydroxypropyl Acrylate (HPA), Hydroxyethyl Methacrylate (HEMA), and Hydroxypropyl Methacrylate (HPMA), are highly versatile building blocks used in the formulation of high-performance polymers. These monomers are characterized by the presence of both an acrylic or methacrylic double bond and a hydroxyl group, allowing them to undergo free-radical polymerization while simultaneously enabling crosslinking with isocyanates, melamine resins, or epoxy compounds. This dual reactivity makes them indispensable in the production of coatings, adhesives, sealants, and advanced resin systems that require superior adhesion, weather resistance, chemical durability, and mechanical strength. In 2024, global production of Hydroxyl Functional Acrylic Monomers reached approximately 354.24 kilotons, with an average global market price of around US\$2,032 per ton, reflecting their strategic importance in multiple downstream industries. The supply chain of Hydroxyl Functional Acrylic Monomers is closely tied to upstream acrylic acid, methacrylic acid, and alkylene oxides (ethylene oxide and propylene oxide). Raw material volatility, especially from crude oil derivatives, has a direct impact on cost structures and price stability. Key international suppliers include BASF, Dow, and Nippon Shokubai, which serve global markets with high-purity products and established logistics networks. In China, a strong base of domestic producers such as Sanlian Chemical, Renxin Environmental Materials, Shandong Xinglu Biological Technology, Changzhou Hecler Chemical, Quzhou Fangda Chemical, and Hechuang Chemical has emerged to serve regional demand at competitive cost levels. On the demand side,

major downstream users include global coatings manufacturers (AkzoNobel, PPG, Sherwin-Williams), adhesive companies (Henkel, Sika, 3M), and resin formulators for construction, automotive, electronics, and packaging applications. International customers typically require narrow product specifications, consistent quality, and compliance with environmental regulations such as REACH and EPA standards. By contrast, many Chinese customers focus more on cost-performance balance, often purchasing broader specification grades to reduce procurement costs, reflecting distinct market dynamics across regions.

The global Hydroxyl Functional Acrylic Monomers market size was estimated at USD 720.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
