Report Overview

Hydroxypropyl methylcellulose (HPMC), also known as hypromellose, is produced through the synthetic alteration of the natural polymer cellulose and is considered safe for human consumption. HPMC is rapidly being used as an alternative to hard shell gelatin capsules, since these natural capsules are manufactured using plant extracts. They meet the dietary and cultural needs of vegetarians by offering excellent alternatives to gelatin capsules. The HPMC material is present in the form of an off-white powder or granules which are hygroscopic and practically insoluble in hot water, acetone, and chloroform, but disintegrate readily in cold water, forming a colloidal solution due to their thermal reversible gelation property. The FDA clinical trials for the safety of HPMC material using rats have exhibited no adverse reaction to this material. It is therefore considered safe for human consumption. Also, the capsules' in-vitro studies have displayed better performance in terms of dissolution/disintegration and decreased time of development compared to gelatin capsules.
