Abstracts

Hyodeoxycholic acid is a bile acid that is found naturally in the intestines of animals, particularly pigs. It is a secondary bile acid formed by the microbial metabolism of primary bile acids in the gut. Hyodeoxycholic acid plays a crucial role in the digestion and absorption of dietary fats. It aids in the emulsification of fats and enhances their solubility for better absorption. In medicine, hyodeoxycholic acid is used as a therapeutic agent for certain liver conditions, including bile acid deficiencies and gallstone dissolution. Its therapeutic effects are attributed to its ability to regulate bile acid homeostasis and promote liver health. The industry trend of hyodeoxycholic acid is experiencing growth and increasing utilization. This is primarily driven by the rising demand for bile acids and related products in the pharmaceutical and healthcare sectors. Hyodeoxycholic acid, as a commonly used bile acid, holds potential therapeutic applications in treating liver disorders and improving digestion. Its use as an active pharmaceutical ingredient in medications targeting bile acid imbalances and gallstone dissolution is on the rise. Additionally, the increasing awareness of and focus on liver health and digestive disorders further contribute to the industry trend. As research and development activities continue and market demand for bile acid-based products expands, the industry trend for hyodeoxycholic acid is expected to remain positive.

The global Hyodeoxycholic Acid market size was estimated at USD 260.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
