Abstracts

Hyperkalemia is a diseases in which levels of potassium are higher than normal level (3.5 and 5.0 mmol/L) in blood serum. Kidneys are responsible for managing potassium balance in the body by regulating its excretion as well as its intake. A person is prone to develop hyperkalemia when the consumption of potassium exceeds that of kidneys? potential to excrete it. The right amount of potassium and sodium in the body play a vital role in normal functioning of the myocardium. Hyperkalemia can occur due to congestive heart failure, chronic kidney disease, or diabetic kidney disease. The condition can also occur when a patient receives renin-angiotensin-aldosterone system inhibitors (RAAS) in kidney disease. Abnormal levels of potassium can lead to irregular heartbeats, which can be fatal. Hyperkalemia is diagnosed by kidney functioning test, creatinine blood test, blood tests, and glucose monitoring. Market Driver: The growing prevalence of chronic kidney disease (CKD) and other conditions that lead to hyperkalemia, such as heart failure and diabetes, is a significant driver of the hyperkalemia treatment market. As the global population ages and the incidence of these underlying conditions rises, the demand for effective hyperkalemia treatments continues to increase. Additionally, advancements in drug formulations and therapies, particularly with the introduction of novel potassium binders and non-invasive treatment options, are expanding the market. Increased awareness among healthcare professionals and patients about the importance of managing hyperkalemia to prevent severe complications further boosts the demand for treatment. Market Challenge: One of the main challenges facing the hyperkalemia treatment market is the high cost of treatment options, especially for newly approved medications. These advanced treatments may not be affordable or accessible to all patients, particularly in low-income regions or countries with limited healthcare infrastructure. Additionally, there are concerns regarding the safety and side effects of some newer therapies, which may lead to hesitation among healthcare providers in prescribing them. The complexity of

managing hyperkalemia, particularly in patients with multiple comorbidities, also complicates treatment protocols, further hindering market growth. The main manufacturers of Global Hyperkalemia Treatment include Vifor Pharma, Astrazeneca, etc. These top two manufacturers hold a market share about 50%. North America and Europe are the major producing regions in the world.

The global Hyperkalemia Treatment market size was estimated at USD 787.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.90% during the forecast period.
