## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hypochlorous Acid Sprays competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Hypochlorous Acid Sprays are disinfectant solutions formulated with hypochlorous acid (HOCl), a weak acid naturally produced by the human immune system to combat pathogens. Known for their broad-spectrum antimicrobial effectiveness against bacteria, viruses, and fungi, these sprays offer rapid action while remaining non-toxic, non-irritating, and environmentally friendly, making them a safer alternative to traditional chemical disinfectants. They are widely applied in healthcare facilities, food processing environments, household cleaning, and personal hygiene, and are gentle enough for use on skin, surfaces, and even in wound care. In 2024, the global industry produced around 520,000 tons of hypochlorous acid sprays annually, with an estimated production capacity of 670,000 tons. Unit prices range from USD 1,200 to 2,800 per ton depending on concentration and stabilization methods, and manufacturers generally operate with an average gross margin of 29%.

The global Hypochlorous Acid Sprays market size was estimated at USD 938.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
