Report Overview

IBM Security Verify Access (formerly IBM Security Access Manager) is a comprehensive identity and access management (IAM) solution designed to provide secure, seamless access to applications and data across hybrid cloud environments. It combines single sign-on (SSO), multi-factor authentication (MFA), adaptive access policies, and risk-based authentication to protect against unauthorized access while simplifying the user experience. The platform integrates with existing IT infrastructure, supporting a wide range of applications, APIs, and cloud services, making it a critical tool for enterprises looking to enforce zero-trust security principles. Its ability to centralize access control, detect anomalies, and automate threat response positions it as a key player in the growing IAM market, particularly for organizations undergoing digital transformation or migrating to cloud-based operations.

The global identity and access management market, where IBM Security Verify Access operates, is experiencing rapid growth, driven by increasing cyber threats, regulatory compliance requirements, and the shift to cloud computing. Valued at over \$13 billion in 2022, the market is projected to grow at a compound annual growth rate (CAGR) of around 12-14% through 2030. Enterprises across industries—particularly finance, healthcare, and government—are prioritizing IAM solutions to mitigate risks associated with remote work, BYOD policies, and third-party access. IBM's solution competes with vendors like Okta, Microsoft Azure Active Directory, Ping Identity, and ForgeRock, differentiating itself with strong hybrid cloud capabilities, AI-driven risk analytics, and deep integration with IBM's broader security ecosystem. However, challenges include pricing pressure from cloud-native competitors and the need for continuous innovation to address evolving threats like AI-powered attacks. IBM's focus on zero-trust frameworks and partnerships with major cloud providers (AWS, Azure, GCP) enhances

its market positioning, particularly for large enterprises with complex, multi-cloud environments.
