Report Overview

Automobile intelligent braking system (IBS) is called electric brake booster. It is composed of mechanical device and electronic control unit. It senses the force and speed of the driver stepping on the brake through the sensor, and transmits it to the electric control unit. After the signal processing, the electronic control unit transmits the signal to the servo motor in the booster mechanism. Driven by the amplification mechanism of mechanical transmission, the main brake pump is pushed to work, so as to realize electricity Control action.
