Abstracts

The semiconductor chip is not an island, it needs to form a more complex system through interconnected input and output (I/O) systems and peripheral systems or circuits. Since the IC chip and its internal circuits are very fragile, they need to be packaged for support and protection. The main functions of the package include: providing electrical connections between the chip and external systems, including power and signals; providing a stable and reliable working environment for the chip, which has a mechanical and environmental protection effect on the integrated circuit chip; and providing a thermal path to ensure the normal heat dissipation of the chip. In order to increase circuit density and continue or surpass "Moore's Law", advanced packaging technology has become inevitable. Global IC Advanced Packaging Equipment key players include ASM Pacific, Applied Material, Advantest, Kulicke&Soffa, DISCO, etc. Global top five manufacturers hold a share about 45%. China is the largest market, with a share about 30%, followed by United States, and Southeast Asia, both have a share over 30 percent. In terms of product, Cutting Equipment is the largest segment, with a share over 25%. And in terms of application, the largest application is Consumer Electronics, followed by Automotive Electronics, etc.

The global IC Advanced Packaging Equipment market size was estimated at USD 7897.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.00% during the forecast period.
