Abstracts

IC Recycling Service refers to the professional recycling of integrated circuit (IC) chips, which is of great significance for resource reuse and environmental protection. It covers various types of IC chips, including processor chips, memory chips, display chips, etc. in computers, mobile phones, and tablets, regardless of brand or model. In addition to chips, it also recycles related electronic components, such as capacitors, resistors, inductors, diodes, and transistors. Professional technicians will conduct appearance inspections on the received IC chips to check for damage and other issues, and use professional testing equipment to test their electrical performance, logic function, etc., and trace and review the source of the chips to ensure their legality and compliance. For repairable IC chips, professional repair and refurbishment are carried out; for non-repairable chips, environmentally friendly treatment is carried out to extract useful metals and materials. Some recycling companies will also roast, grind, screen, and magnetically separate the chips to recover precious metals such as gold, silver, and copper.

The global IC Recycling Service market size was estimated at USD 903.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
