Report Overview

ICAD (Intracranial Atherosclerotic Disease) pathology refers to the narrowing or blockage of arteries within the brain due to the buildup of atherosclerotic plaques, which are composed of lipids, calcium, fibrous tissue, and inflammatory cells. This condition is a leading cause of ischemic stroke, particularly in Asian, Hispanic, and African American populations, due to its association with risk factors such as hypertension, diabetes, and hyperlipidemia. The disease progresses through endothelial dysfunction, plaque formation, and eventual arterial stenosis or occlusion, impairing cerebral blood flow and increasing the risk of thromboembolic events. Diagnosis typically involves imaging techniques like magnetic resonance angiography (MRA), computed tomography angiography (CTA), or transcranial Doppler, while treatment includes aggressive medical management with antiplatelets, statins, and blood pressure control, or in severe cases, endovascular interventions such as angioplasty and stenting. The market for ICAD pathology is driven by the rising global burden of stroke, advancements in diagnostic imaging, and increasing demand for minimally invasive therapies, though challenges remain in optimizing long-term outcomes and reducing recurrence rates.

The global ICAD Intracranial Atherosclerotic Disease Pathology market size was estimated at USD 208.09 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.89% during the forecast period.
