Abstracts

ICCP (Impressed Current Cathodic Protection) System is a device that applies external current to the protected metal structure through a DC power supply (potentiostat) for cathodic protection. The system uses high silicon cast iron, graphite, and other materials as auxiliary anodes, which are connected to the protected metal via cables to form a circuit that polarizes the metal into a cathode and suppresses corrosion; The reference electrode monitors the metal potential in real time and feeds it back to the power supply, automatically adjusts the output current to ensure that the potential is stable within the protection range. It has the characteristics of adjustable current, wide applicability, and good effect, and is widely used in the field of anti-corrosion of metal structures such as oil and gas pipelines, ships, offshore platforms, and storage tanks.

The global ICCP Systems market size was estimated at USD 742.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.90% during the forecast period.
