Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ice Cream Carts competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An ice cream cart is a mobile device with insulated/refrigerated storage space for selling ice cream and frozen desserts. It is commonly found in parks, beaches, campuses, neighborhoods, festivals, and exhibitions. Some carts are connected to bicycles or motorcycles for increased mobility, and this is particularly common in developing regions; in Western countries, carts often coexist with ice cream trucks. Typical technologies include dry ice insulation, cold plate cooling (with replaceable cooling boxes), and mechanical compressors (condensation systems) to meet different range and cost requirements. It solves problems such as limited customer traffic, discontinuous cold chain, and power constraints imposed by fixed stores, enabling rapid reach of people and increasing conversion rates and brand exposure through low-cost mobile vending. The product is priced at approximately \$1,500 per unit, with global sales of approximately 1.35 million units. The gross profit margin is approximately between 30% and 45%. The upstream of ice cream carts mainly involves refrigeration systems (compressors, condensers, cold plate cold storage components), insulated enclosures and structural materials (stainless steel, fiberglass, wood veneer), as well as dry ice supply and battery/electronic control modules; the midstream focuses on vehicle assembly and cold insulation performance calibration (5-7 hours of battery life, 4-9 wellhead capacity, etc.), and enhances premium pricing through brand appearance and customized modules; the downstream covers high-traffic scenarios such as parks/beach/festivals, exhibitions and catering, and shopping mall pop-ups, with demand driven by mobile catering and street economy growth. Future development will focus on more efficient cold storage and lightweight chassis, electric drive and IoT

operation (location/revenue data and remote operation and maintenance), modular water tanks/display cabinets and retro-themed aesthetics, to balance operational efficiency and social media value.

The global Ice Cream Carts market size was estimated at USD 2033.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
