Abstracts

Ice cream packaging machine is a kind of mechanical equipment specially used for packaging ice cream (ice cream). It is usually designed with multiple packaging processes, which can automatically complete a series of operations such as packaging, sealing, cutting and sorting of ice cream. This machine not only improves the packaging efficiency, but also ensures the neatness and beauty of the packaging. It is an indispensable and important equipment in the production process of ice cream. The working principle of the ice cream packaging machine usually involves conveying the ice cream from the production line to the packaging station, and then wrapping the packaging material (such as film, paper or composite material) around the ice cream through a series of mechanical actions and sealing it. During the sealing process, the machine uses heating elements to fuse the edges of the packaging material together to ensure the sealing of the packaging. Then, the machine will perform a cutting operation to separate the packaged ice cream from the continuous packaging material to form a single packaged product.

The global Ice Cream Packing Machine market size was estimated at USD 1156.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
