Report Overview

Ice-cream premix and stabilizer are two important ingredients used in the production of ice cream. Ice-cream premix is a pre-blended mix of various ingredients that are used to make ice cream. It typically contains milk solids, emulsifiers, sweeteners, and flavors. The premix is added to a churner along with additional ingredients, like cream or fruit, to produce ice cream. Stabilizers are substances that help maintain the structure and texture of ice cream. They prevent the formation of ice crystals and maintain the smoothness of the finished product. Stabilizers, such as xanthan gum and carrageenan, are added to ice cream to enhance its shelf life and prevent melting during transportation and storage.

The global Ice-cream Premix and Stabilizer market size was estimated at USD 105.20 million in 2023 and is projected to reach USD 142.13 million by 2032, exhibiting a CAGR of 3.40% during the forecast period.
