Abstracts

An ice cream soft serve machine is a specialized device that combines a cooling mechanism with an agitating unit. Its primary purpose is to produce soft-serve ice cream. The operational process of these machines involves several key steps. First, they cool down a mixture of ingredients typically including cream, milk, and sugar using the built-in cooling system. Then, an agitating device transforms these ingredients into a smooth and creamy consistency. Finally, the machine dispenses the mixture through a nozzle, creating a soft-serve ice cream.
