Abstracts

Ice fishing electronics refers to a specialized category of fishing technology designed for use in icy environments, primarily consisting of sonar and GPS devices that enable anglers to locate fish, map underwater structures, and navigate safely on frozen bodies of water. These devices include flashers, which provide real-time sonar readings in a circular display to show fish location and bottom composition directly below the ice, as well as more advanced portable fish finders with LCD or CHIRP sonar capabilities that offer detailed imaging, chart plotting, and networking features. Key products often integrate GPS for marking waypoints, tracking routes, and identifying productive fishing spots, while also being built to withstand extreme cold, with rugged, waterproof designs and long-lasting battery systems suited for extended use in sub-freezing conditions. The technology enhances efficiency and safety by reducing guesswork, helping users avoid thin ice, and increasing catch rates through precise target identification.

The global Ice Fishing Electronics market size was estimated at USD 350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
