Abstracts

Ice melters are products designed to accelerate the melting of ice and snow on surfaces such as roads, driveways, and walkways, enhancing safety and accessibility during winter weather conditions. These melters typically contain salts, chemicals, or blends that lower the freezing point of water, allowing ice to melt more quickly. Common ingredients include sodium chloride, calcium chloride, and magnesium chloride, each offering different melting capabilities and environmental impacts. Ice melters are essential for preventing accidents and maintaining clear surfaces in icy conditions, but their use requires careful consideration of their potential effects on infrastructure, vegetation, and the environment.
