Abstracts

Ice rink cooling systems are specialized refrigeration units designed to maintain and regulate the temperature of ice surfaces in both indoor and outdoor rinks, utilizing a network of pipes embedded beneath the rink surface through which a chilled secondary coolant, such as a glycol-water mixture, is circulated after being cooled by a primary refrigeration system involving compressors, condensers, and evaporators; these systems are engineered to ensure consistent ice quality, precise temperature control, and energy efficiency, accommodating various applications from recreational skating rinks and hockey arenas to Olympic-sized facilities and temporary installations, while also integrating features like heat recovery to repurpose waste thermal energy for building heating or water preheating, thereby optimizing operational sustainability and reducing overall energy consumption.
