Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ice Rink Liner competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of ice rink linings was approximately 8-12 million square meters, with an average selling price of about US\$3-15 per square meter, a gross profit margin of about 40%, and a single production line capacity of about 500,000-3 million square meters. Ice rink linings are high-strength, leak-proof, flexible material layers used in artificial refrigeration ice rinks. They are laid on top of the ice rink's base layer (such as a concrete or sand base), and their main function is to form a waterproof barrier, trapping water used by the refrigeration pipes and ice layer, preventing it from leaking into the base structure. The upstream of the ice rink lining industry is the chemical industry, which provides high-molecular raw materials such as HDPE and additives; the midstream consists of professional lining manufacturers responsible for processing them into rolls and completing welding and laying; and the downstream directly serves ice rink contractors and operators. The core demand stems from the global popularization of winter sports (such as ice hockey and figure skating), the construction and renovation of commercial and public winter entertainment facilities (such as seasonal ice rinks and snow parks), and the construction of multi-functional venues.

The global Ice Rink Liner market size was estimated at USD 80.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
