## Abstracts

Implantable Collamer Lenses (ICL) for myopia are a sophisticated and effective surgical solution for individuals seeking to correct their nearsightedness. Unlike traditional corrective lenses, ICLs are implanted inside the eye, positioned behind the iris and in front of the natural lens, providing a permanent correction that doesn't require the removal of corneal tissue. Made from biocompatible collamer material, these lenses offer excellent optical performance and stability, leading to improved vision quality and reduced dependency on glasses or contact lenses. The procedure is minimally invasive, typically involving a quick recovery period with minimal discomfort. ICLs are particularly beneficial for patients with high degrees of myopia or those who are not suitable candidates for laser vision correction procedures like LASIK. This innovative approach not only enhances visual acuity but also maintains the eye's natural anatomy and health.

The global ICL for Myopia market size was estimated at USD 424.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
