## Abstracts

ICU Booms or pendants are integrated medical equipment support devices, usually composed of multi-joint robotic arms, pipeline management systems and modular interfaces, used to centrally suspend, position and manage key equipment such as ventilators, monitors, infusion pumps, etc. in intensive care units. They are installed on the ceiling or wall, flexibly adjust the height and angle of the equipment, optimize the spatial layout, reduce the entanglement of ground pipelines, and support rapid equipment switching and disinfection, significantly improve the efficiency of medical operations, reduce the risk of infection, and adapt to complex scenarios such as emergency treatment, surgery and continuous monitoring of critically ill patients. They are important infrastructure for modern intelligent ICUs. From a regional perspective, North America dominates, accounting for about 40%, thanks to high-end medical infrastructure and strict hospital infection control standards. The Asia-Pacific region has the fastest growth rate, especially in China, India and other countries, driven by the demand for new hospitals and ICU expansion. With the global shortage of critical medical resources and the increase in ICU beds, this will drive the purchase of this equipment. Under the demand for infection prevention and control, centralized pipeline management reduces the risk of contamination, and the ICU boom meets the infection control standards of WHO and medical facilities in various countries. In addition, after the epidemic, countries have strengthened their critical medical capacity reserves, such as the US HHS appropriation to upgrade ICU facilities. These factors have promoted the demand for ICU booms to varying degrees. However, the unit price of high-end booms exceeds US\$100,000, and procurement in developing countries relies on financial leasing. The building structures of some old hospitals are difficult to bear, and the ceiling installation rate is less than 50%. These also bring uncertainties to the development of ICU booms. Global ICU boom manufacturers are controlled by international giants such as Dräger, Baxter (Hillrom), and Steris. Companies need to

focus on cost-effective solutions (such as modular design), emerging market penetration, and technological innovation (automation + data integration) to address cost and compatibility challenges and seize growth opportunities.

The global ICU Booms market size was estimated at USD 412.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
