Abstracts

ICU Medical pendants create an efficient nursing environment by delivering safer, more ergonomic, and streamlined access to medical equipment and gases, improving space, and accessibility, and reducing hazards within the patient area. Medical pendant is a vast array of space-saving products for operating theatre, endoscopy rooms, diagnostic rooms, and intensive care units of therapy rooms, used for hosting power or medical gas outlets and connections for anesthesia, surgical instruments, and endoscopy devices. The core drivers of ICU medical pendants include the global expansion of ICU beds (especially the increase of more than 30% after the COVID-19 pandemic), the aging population exacerbating the demand for critical care, and the trend of intelligent upgrades (such as integrated remote monitoring modules). On the technical level, modular design (such as Dräger's Polaris series) and IoT integration (real-time data interaction) have become the focus of competition. Leading companies Dräger and Hillrom (now under Baxter) account for more than 35% of the market share and strengthen their product lines through mergers and acquisitions. Regionally, North America and Europe dominate the market, and the Asia-Pacific region has the fastest growth rate, driven by the upgrade of medical infrastructure in China and India, but high unit prices and strict supervision (FDA/CE certification) still restrict penetration in emerging markets. Future trends focus on miniaturization (suitable for mobile ICUs) and infection control functions (antibacterial materials + contactless operation), while AI-driven equipment management platforms will improve operation and maintenance efficiency.

The global ICU Medical Pendant market size was estimated at USD 412.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
