Abstracts

The insulated gate bipolar transistor (IGBT) and thyristor provide the advantage over metal-oxide-semiconductor field effect transistor (MOSFET) for minimum switching time and switching losses. In addition, it also provides the advantage over elevated breakdown voltage and less conduction losses of the bipolar junction transistor (BJT) in order to meet current power need. FACTS systems and HVDC use power electronic converters for power conversion and control power quality. Earlier, IGBTs and thyristors were used as key components in HVDC and FACTS converters for many years and now have been developed for higher power use. These devices also use high breakdown voltage and conduction losses in BJT to fulfill current power requirement.

The global IGBT and Thyristor market size was estimated at USD 6377.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global IGBT and Thyristor market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
