Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on IH Pressure Rice Cooker competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global IH Pressure Rice Cooker production reached approximately 2405.4 K units, with an average global market price of around US\$ 260 per unit. An IH (Induction Heating) Pressure Rice Cooker is an advanced kitchen appliance designed to cook rice with exceptional precision and consistency by utilizing induction heating technology combined with pressure cooking. Unlike traditional rice cookers that use a simple heating plate, IH rice cookers generate heat directly within the inner pot through electromagnetic induction, ensuring uniform heating throughout the pot. When paired with pressure cooking, this method increases the boiling point of water, allowing rice to cook at higher temperatures, which results in enhanced flavor, improved texture, and faster cooking times. IH pressure rice cookers often come with smart features, such as fuzzy logic control, multiple cooking modes, and high-grade non-stick inner pots, making them popular in both domestic and professional kitchens where perfect rice quality is desired.

The global IH Pressure Rice Cooker market size was estimated at USD 625.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
