Abstracts

IL-1R inhibitors are a class of compounds or molecules that inhibit the activation or signaling of the interleukin-1 receptor (IL-1R). IL-1R is a cell surface receptor that, after binding to IL-1 and other cytokines, can initiate a series of signaling pathways and participate in regulating biological processes such as immune and inflammatory responses. IL-1R inhibitors can be used to study the molecular mechanisms regulating the IL-1 signaling pathway, as well as their therapeutic potential in inflammatory diseases, autoimmune diseases, etc. With the deepening of biomedical research and the expansion of clinical applications, the demand for IL-1R (interleukin-1 receptor) inhibitors is growing day by day. IL-1R inhibitors have broad application prospects in the fields of inflammatory diseases, autoimmune diseases and other fields. They inhibit the activity of IL-1R, thereby regulating immune responses and reducing inflammation to achieve therapeutic purposes. Therefore, as the patient population for these diseases increases, the demand for IL-1R inhibitors will continue to expand. Secondly, with the continuous development of biotechnology, the development of new IL-1R inhibitors continues to emerge. These new inhibitors have higher specificity, lower side effects and better therapeutic effects, providing more opportunities for clinical treatment. Overall, the IL-1R inhibitor market has broad development prospects and huge market potential.

The global IL-1R Inhibitor market size was estimated at USD 1505.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
