## Abstracts

IL-8R inhibitors are a class of compounds or biomolecules that block or reduce the activation or signaling of the interleukin-8 receptor (IL-8R). IL-8R is a cell surface receptor that, after binding to interleukin-8 (IL-8), triggers intracellular signaling pathways and participates in regulating biological processes such as inflammatory response, cell migration, and chemical signal transduction. The effects of IL-8R inhibitors can include reducing the expression of IL-8R, interfering with the binding of IL-8 to IL-8R, blocking IL-8R-mediated signal transduction, etc. These compounds, or biomolecules, are often used as drugs, with potential therapeutic applications, such as in inflammatory diseases and cancer. With the increasing understanding of the role of IL-8 and its receptors in pathological processes such as inflammatory diseases, autoimmune diseases, and tumors, the market demand for IL-8R inhibitors is rising steadily. This type of drug can effectively block the combination of IL-8 and IL-8R, thereby inhibiting the inflammatory response and providing a new method for the treatment of related diseases. In addition, with the popularization of precision medicine and personalized treatment concepts, IL-8R inhibitors have received more and more attention as drugs that can treat specific targets. This trend is expected to drive further expansion of the IL-8R inhibitor market. To sum up, the IL-8R inhibitor market is currently in a rapid development stage. In the future, the IL-8R inhibitor market is expected to continue to maintain rapid growth.

The global IL-8R Inhibitor market size was estimated at USD 682.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
