Abstracts

Radar sensor is a sensor on equipment used in radar, a method for detecting the position and velocity of a distant object. Radar is a detection system that uses radio waves to determine the range, angle, or velocity of objects. It can be used to detect aircraft, ships, spacecraft, guided missiles, motor vehicles, weather formations, and terrain. Imaging radar is an application of radar which is used to create two-dimensional images, typically of landscapes. Imaging radar provides its light to illuminate an area on the ground and take a picture at radio wavelengths. It uses an antenna and digital computer storage to record its images. Global Imaging Radar Sensor key players include Continental, Hella, Zf Friedrichshafen AG, etc. Global top three manufacturers hold a share about 60%. North America is the largest market, with a share over 35%, followed by Europe and China, both have a share over 40 percent.
