Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Imiglucerase competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Imiglucerase is a biological agent prepared using recombinant gene technology. It belongs to the category of enzyme replacement therapy drugs, and its core application is in the treatment of the rare disease Gaucher disease. Imiglucerase controls the disease at its metabolic root by artificially supplementing the missing enzyme, and is a core drug for treating type 1 and some types 3 Gaucher disease. Being a recombinant biological agent, it requires long-term intravenous infusion. Although it is relatively expensive, it effectively prevents organ damage and improves patient survival. Imiglucerase, as a benchmark drug in the field of enzyme replacement therapy for Gaucher disease, is occupying a core position in the global and Chinese rare disease drug market, relying on its clear clinical value and stable demand. In terms of market size, the global and Chinese imiglucerase market had already reached a scale of hundreds of millions of yuan by 2024, and the global market is expected to continue to expand at a steady compound annual growth rate until 2030. This growth trend stems from the increased diagnosis rate of Gaucher disease patients, but even more so from the clinical trust established by the product in long-term treatment. Currently, the global imiglucerase market is dominated by Sanofi. Through its acquisition of Genzyme, a benchmark company in the global rare disease field, in 2011, Sanofi incorporated imiglucerase (trade name: Cerezo?) into its core product portfolio. The research and development of this product can be traced back to the 1990s?in 1994, imiglucerase was first approved by the US FDA, becoming the first recombinant enzyme replacement therapy drug for the treatment of Gaucher disease, completely changing the predicament of Gaucher disease patients having no effective treatment options. In 2008, Sanofi facilitated the

entry of imiglucerase into the Chinese market and obtained approval for its market launch. To date, Sanofi has established an imiglucerase production and supply system covering major global markets, with a sales and service network centered in core cities such as Beijing, Shanghai, and Guangzhou, radiating across the entire country in China alone.

The global Imiglucerase market size was estimated at USD 1022.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
