## Abstracts

Immersed Termination refers to a specialized process or component design where the termination point of an electrical, optical, or fluid system is submerged in a liquid medium for enhanced performance or insulation. This technique is commonly used in high-voltage systems, subsea equipment, and cooling applications to provide superior thermal management, electrical insulation, or protection against environmental factors. By immersing the termination in mediums such as oil or dielectric fluids, it ensures reliability and efficiency in demanding conditions, such as in subsea power cables or advanced cooling systems for electronic components.
